

TriVoKo

Phase 5 - Seller dashboard

Time	Start date	Finish date	Status
1.5 weeks			Not started

Goal: Sellers run their own shop: add products with photos, ship their packages, and see what they earn.

Real-life example: Each shopkeeper gets their own back office: a stock register, a packing table, and an account book that says how much the mall owes them.

Step checklist

★ = you type the key logic (Claude explains first, then reviews). "You" = only you can do it.

#	Step	Who	Done
1	Seller layout + dashboard: today's packages, low stock, earnings, products waiting for approval	Claude	☐
2	Products list + product editor: variants table, photo upload to Cloudinary (drag to reorder, max 8, 5 MB), submit for approval; price change writes price_history	Claude	☐
3	Low-stock warnings (default below 5)	Claude	☐
4	PackageStatus enum with allowedNext() + @Version; Packed → Shipped (tracking number) → Delivered (demo button)	Claude	☐
5	Cancel before shipping (customer or seller): refund that package, stock back; race test cancel-vs-ship → one wins, other gets 409	Claude	☐
6	seller_ledger: DELIVERED adds +90%; earnings page with the ledger lines	Claude	☐
7	Customer order detail: tracking timeline per package; email + bell at every step	Claude	☐
8	Sales charts for 7 / 30 / 90 days (Recharts, cached)	Claude	☐
9	Tests: ownership, every package move, ledger amounts	Claude	☐

Output of this phase

- Seller back office
- Package tracking timelines
- Earnings ledger and sales charts

Done when (check before moving on)

Check	Passed
A seller ships a package and the customer sees the timeline update	☐

Check	Passed
Cancel-vs-ship race test passes	☐

Explain it back (in your own words)

Question	Done
What is a state machine and why use <code>allowedNext()</code> ?	☐
What does <code>@Version</code> do when two people change the same package?	☐
Why is the seller balance the sum of ledger lines instead of one number?	☐

Finish routine

Check	Done
All tests pass and CI is green	☐
Committed and pushed	☐
Done-when checks shown working in the browser	☐
Session summary + <code>SESSION_LOG</code> written	☐

Skills you practise: State machines, optimistic locking, file upload, charts, caching

Where your work goes: `frontend\src\pages\seller`, `backend\...\order`, `...\seller`

My notes
